RTB

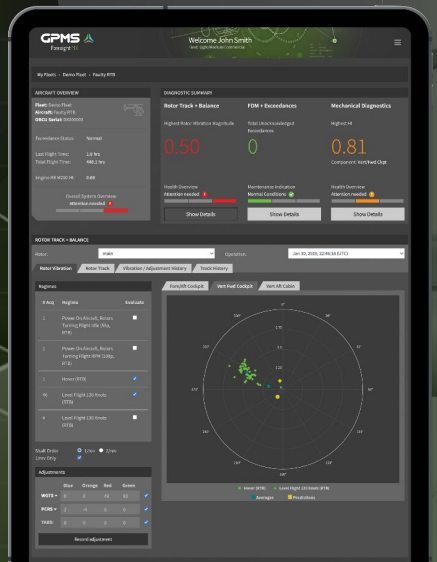
Foresight MX
by GPMS

The Costs of RTB are Real

(and you know it)

For operators without Foresight MX, every RTB event is a major hassle, with expenses that add up. Most RTBs require approx. 5 flights dealing with:

- Old, inefficient technology
- Miscalculations & maladjustments
- Equipment wear & tear with overnight shipping to bases
- Lost business & customer satisfaction
- Crew headaches
- Valuable man-hours, fuel, & component time wasted!



Foresight MX delivers automated RTB tuning solutions after every flight – forever changing how you'll view RTB.

Business is Better with Zeros.

Zero Maintenance Flights

If the pilot can feel vibrations, it's already too late. With Foresight MX, tuning solutions are already calculated upon completion of every flight. So, if you make smaller more regular tuning adjustments, RTB maintenance flights may not even be required!

Zero Lost Business

Can't fly, can't earn. RTB events cost you customer trust and future business.

Zero AOG Headaches

Foresight MX reduces the stress from AOGs, premature component wear, overtime, pilot complaints, and missing flights!

		Typical RTB Costs	Reduce Your Costs with Foresight MX	Write in your own numbers below
BASIC COSTS	# of RTB flights per year per aircraft	15	1	Your # of RTB flts/yr/ac
	Total RTB Flt hrs/yr/aircraft	6	0.4	× .4 = Your RTB flt/hrs/yr/ac
	Aircraft DMC	$1,000	$1,000	× Your DMC
	Annual basic RTB cost	$6,000	$400	= Your annual basic RTB cost
REAL COSTS	AOG shipping & OT pay	$2,000	0	+ Your AOG shipping & OT pay
	Lost revenue from missed flights and/or availability penalties	$5,000	0	+ Lost revenue from missed flights and/or availability penalties
